## OPERATION ON SETS

- Union of sets- The union of two sets $A$ and $B$ is set of elements which are in A , in B or in both A or B . It is represented by AUB.
$A \cup B=\{x: x \in A$ or $x \in B\}$
Eg: $A=\{2,5,7\} \quad B=\{4,5,9\}$ Then $A \cup B=\{2,5,7,4,9\}$
- Some Properties of the Operation of Union :
- (i) $\mathrm{A} \cup \mathrm{B}=\mathrm{B} \cup \mathrm{A}$ (Commutative law)
- (ii) $(A \cup B) \cup C=A \cup(B \cup C)$ (Associative law)
(iii) $\mathrm{A} \cup \phi=\mathrm{A}$ (Law of identity element, $\phi$ is the identity of U )
- (iv) $\mathrm{A} \cup \mathrm{A}=\mathrm{A}$ (Idempotent law)
- (v) $\cup \cup A=U$ (Law of $U$ )

## OPERATION ON SETS

- Intersection of sets - The intersection of two sets has only the elements common to both sets. It is represented by $A \cap B$
$A \cap B=\{x: x \in A$ and $x \in B\}$
Eg: $A=\{1,3,4\} \quad B=\{2,8,3,1\} \quad$ Then $A \cap B=$ $\{3,1\}$

## OPERATION ON SETS

- Disjoint sets - Two sets are said to be disjoint sets if they have no element in common. We can also say, two disjoint sets are sets whose intersection is empty set or null set.
Eg: $A=\{2,5\} \quad B=\{7,9\} \quad A s \quad A \cap B=\phi$
Therefore $A$ and $B$ are disjoint sets.
- Difference of two sets- The difference of two sets, written $A$ - is the set of all elements of set $A$ that are not elements of set $B$.
$E g: A=\{4,8,7\} \quad B=\{5,9,4\} \quad A-B=\{8,7\} \quad B-A=\{5,9\}$
