

NAME \_\_\_\_\_ CLASS IV \_\_\_\_\_

DATE - 28/04/2020

*We know that birds reproduce by laying eggs. Now, let's look at the life cycle of a hen.*

## LIFE CYCLE OF A BIRD

**Fill in the blanks to learn more about the development of a chick.**

A chick is formed and grows inside a \_\_\_\_\_. This growing baby inside an egg is called an \_\_\_\_\_. In the beginning embryo appears as a \_\_\_\_\_ spot in the yolk. By fourth day the embryo becomes clearer. To see the large eyes we have to wait till the \_\_\_\_\_ day. On day twelve, wings, legs and \_\_\_\_\_ are clearly seen. Then, on day \_\_\_\_\_ the baby chick (hatchling) comes out of an egg.

## Care of Young Ones

### MAMMALS

*They take care of the young ones by:*

- *feeding, cleaning, guarding them*
- *keeping them warm*
- *teaching them to find food and live their own life*

### BIRDS

*After laying eggs birds sit on them to provide warmth. They nurture the eggs until they hatch. The young birds are protected and given food until they are independent enough to fly in search of their own food.*

## LEARNING WHILE TYPING

Let's have some fun with MS Word.

- Open MS Word.
- Write the heading 'LIFE CYCLE OF A HEN'. Use Font: COMIC SANS MS and SIZE: 14. Click on the Centre Alignment button.
- Press enter and now type the stages of the lifecycle of a hen given in the picture shared above.
- When you are done, save the document and exit MS WORD.
